

Masters Level Biostatistician
Division of Biostatistics, School of Public Health

The Division of Biostatistics in the University of Minnesota's School of Public Health is seeking an experienced masters level Biostatistician to join a team of Biostatisticians and Epidemiologists working on epidemiological studies and clinical trials involving persons with HIV or other infectious diseases (ID). Applicants should possess an M.S. in biostatistics, applied statistics, or a related field, and a minimum of one year post M.S. experience in biostatistics. The position is an annually renewable professional academic appointment.

Duties for this position include performing analyses of ongoing and completed clinical trials, analyses of cohort studies, working with investigators in design and development of protocols, writing statistical analyses plans, reviewing protocols, generating reports, and working with investigators in manuscript and presentation preparation.

In addition to standard statistical methodology, applicants should have expertise in longitudinal and life-table (time-to-event) methods and research projects involving human participants. Candidates must also possess demonstrated competence in using SAS for data analyses, excellent written and verbal communication skills, data management skills, and experience working independently.

Preference will be given to candidates with applicable background in the analysis of clinical trials and longitudinal studies, particularly in the context of HIV or ID studies, and demonstrated experience with SAS. For more information and to apply for this position, please go to <http://employment.umn.edu> and search for this posting by using Requisition Number 163810. If you have questions about applying online contact 612-625-2000 or employ@umn.edu.

The University of Minnesota is an equal opportunity educator and employer.
