

# GROUP PRESENTATIONS

The class are divided into small groups, 2-3 students each. Each group searches and chooses 2 **articles published in 2008-2010** in any field of biomedical sciences; **these articles use regression method** as part of their data analysis. **All members of the group should participate equally to prepare a summary and a presentation (about 20-25 minutes for each article).**

Each presentation should last about 30 minutes (about 15 for each article) and covers these areas:

Specific Aim or Aims

**Study Design and Data Collection**

**Data Analysis**

**Findings and Conclusion**

Focus more on **Statistical Methods and Data Analysis** (identify components of regression methodology: model and model building, data transformation, goodness-of-fit or any special features, etc...; software; strengths and weaknesses if found).
