GROUP PRESENTATIONS

The class are divided into small groups, say 5 students each. Each group searches and chooses 2 **articles published in 2016-Present** in any field of biomedical sciences; **these articles use regression method** as part of their data analysis. **All members of the group should participate equally to prepare a summary and a presentation (about 25 minutes for each article; 1 hour total).**

Each presentation should last about an hour (about 25-30 for each article) and covers these areas:

Specific Aim or Aims

Study Design and Data Collection

Data Analysis

Findings and Conclusion

Focus more on **Statistical Methods and Data Analysis** (identify components of regression methodology: model and model building, data transformation, goodness-of-fit or any special features, etc…; software; strengths and weaknesses if found).
