

On page IA1/13 (1/21/08) I said,
Referring to the vocal folds data:

This is a repeated-measures design:

- subject = "study number" is subject effect
- 2 fixed effects factors.

→ image form, varying entirely within subject
- rater, varying (alas!) both within and between subjects.

← THIS IS INCORRECT!

THIS WOULD BE CORRECT if each subject had equal numbers of observations for strobe and HSV.

However, as you can see on IA1/12 (next page) this is not the case.

IA ~~1~~2/13 correction

study number	image form	rater	% open phase
	10 strobe	CR	56
	10 strobe	KK	70
	10 strobe	KK	70
	10 HSV	KUC	70
	10 HSV	KK	70
	10 HSV	KK	60
	60 strobe	KUC	50
	60 HSV	CR	54
	66 strobe	KUC	60
	66 strobe	KUC	70
	66 HSV	KK	56
	79 strobe	CR	65
	79 HSV	KK	56
	119 strobe	KK	50
	119 HSV	KUC	55
	119 HSV	KUC	67
	157 strobe	KUC	50
	157 strobe	KUC	50
	157 HSV	KUC	50
	166 strobe	KK	50
	166 HSV	KUC	57
	168 strobe	CR	56
	168 strobe	KUC	60
	168 HSV	CR	50
	181 strobe	CR	92
	181 HSV	KUC	78
